Deep Server™ Workgroup Edition

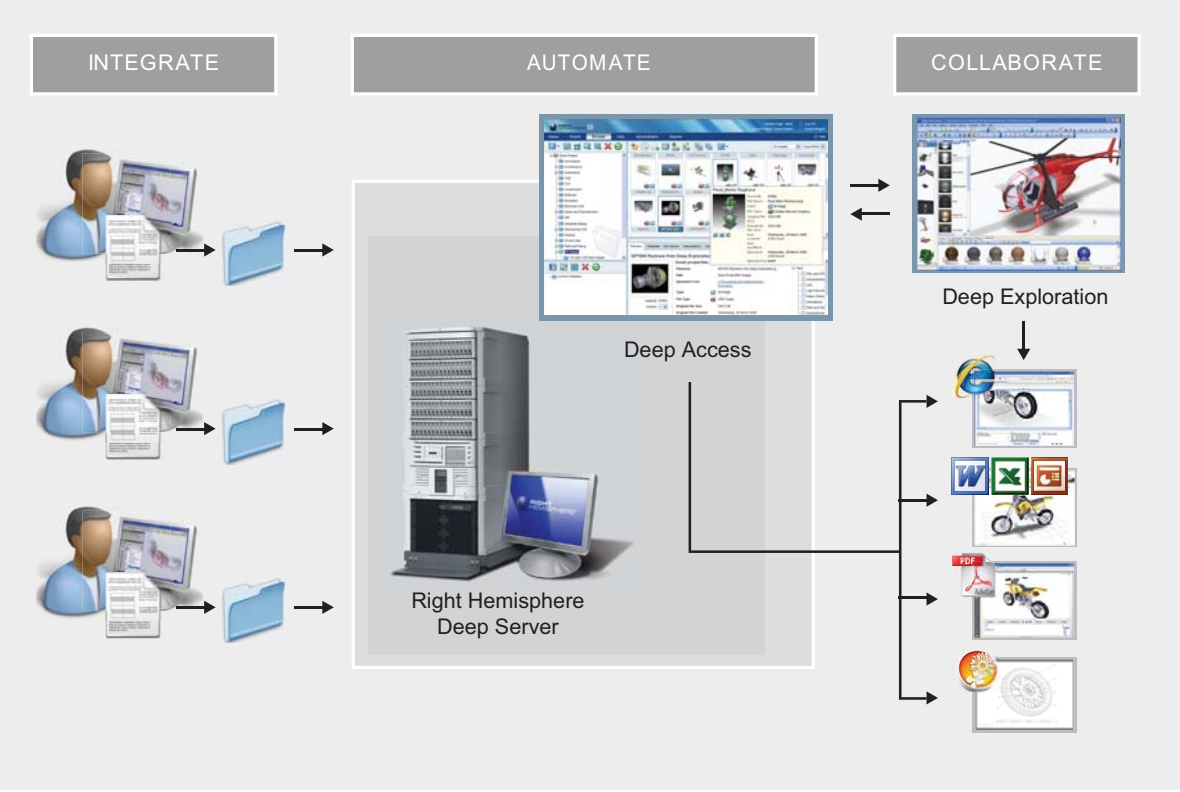
Feature Highlights

- Automate the publishing, management, and delivery of visual product data for corporate workgroups or small businesses
- Comprehensive solution that enables downstream users to access and collaboration with engineering data.
- Affordable solution that leverages the enterprise-class performance and robustness of Deep Server Enterprise Edition

Introduction

World class manufacturers such as Bell Helicopter, Chrysler, Halliburton, Joy Mining Machinery, and Sikorsky Aircraft have deployed enterprise class solutions based on Right Hemisphere's Deep Server Enterprise Edition technology. While they had different business problems, they all had a common need to automate how engineering data was processed and delivered on a global and flexible basis across their value chain. The need to automate and reuse engineering data is not just a problem for large enterprises. Efficiently sharing product information is something that corporate workgroups and small product companies require as well. And now there is a solution. >>>

Introducing Deep Server Workgroup Edition, provides an all-in-one and comprehensive solution for corporate work groups and small businesses. CAD data from an engineer's desktop is linked to Deep Server via hot folders for automated processing into lightweight product graphics that are published into specified files or documents required by the business. Deep Server Workgroup Edition includes a limited scope version of Right Hemisphere's award winning Deep Access software which provides a unified approach for searching, collaborating and delivering product information to the extended enterprise easily and securely.



Deep Server Workgroup Edition leverages enterprise class technology to provide a complete solution for bringing CAD data to non-engineers in an automated and efficient manner.

Right Hemisphere's Deep Server Workgroup Edition Helps Companies:

Define Downstream Deliverables for Automated Processing

- The Deep Server Process Designer, part of the Deep Server Workgroup Edition, provides the tools to graphically replicate and automate data fusion and optimization processes.. This generates huge cost savings and greatly speeds production of product related media.

Use Automation to Replace Manual Processes

- Unlike today's time and labor intensive manual 2D and 3D authoring processes, >>> Deep Server automates these processes to deliver a range of intermediate graphics, finished graphics, and even finished documents all from accurate, up-to-date engineering.

Deliver at Product Media at Scale

- Deep Access works with Right Hemisphere's Deep Server process automation system to deliver a unified, searchable repository of 2D, 3D and related media assets and metadata accessible to down-stream users via only a web browser.

The Deep Server™ Editions

Right Hemisphere's Deep Server is a highly scalable and robust platform technology that is available is different configurations to meet company specific capability and scalability needs.

- ### Deep Server Enterprise Edition
  Enterprise class visual product communication & collaboration backbone.
- ### Deep Server Workgroup Edition
  A comprehensive and affordable visual product communication & collaboration solution scaled to support corporate workgroups and SMB's.
- ### Deep Server View Edition
  Enables 3D viewing of intelligent product information in SAP PLM and other 3rd party products that OEM and / or integrate Right Hemisphere's Deep View™ technology.

About Right Hemisphere

Right Hemisphere is the leading provider of enterprise visual product communication, collaboration and publishing solutions. The company's software and solutions help Global 1,000 manufacturers to optimize their mission critical business processes such as sourcing, manufacturing, marketing and customer support. The software does this by integrating disparate product data readily available in corporate CAD, PLM, and ERP systems. >>> It then automatically delivers this intelligent product information into commonly used business documents, file formats and even directly into business applications for secure downstream use anytime, anywhere. Founded in 1997, Right Hemisphere is a privately held, venture-funded corporation based in Silicon Valley and Auckland, New Zealand. For more information please visit **www.righthemisphere.com**.
