- New Version of the Award-Winning Deep Paint® -

March 18, 2003, Los Angeles CA, USA

Right Hemisphere, a leading provider of visual solutions software, announced today the immediate availability of the next generation of the award-winning Deep Paint. The newly released Deep Paint Version 2 brings digital artists and graphics professionals a significant enhancement of the previous version.

Feature enhancements include a simpler and easier to use user interface, and a customizable color palette so artists can create their own swatch. New preview features are included with Deep Paint Version 2. Brush Cursor and stroke preview lets artists preview the brush shape and example stroke of the preset before painting. Print preview allows artists to preview the image, as it would appear printed. New categories of presets brushes include dry and wet material, surface textures and special art cloning effects.

In addition to these key features, there have been improvements made to the image stamp feature, which allows artists to quickly define a temporary image stamp and change the image size, rotation, interactively in any viewport. Also, using splines, the artist can define the path of a brush stroke with more accuracy. Updated on-line documentation quickly references key features with new shortcut keys.

"Anyone with an artistic inclination will be able to enjoy this software. It is designed for beginners and professionals alike who require a digital paint tool that doesn't get in the way of creativity. With a digital camera and a copy of Deep Paint 2.0 you can really let your imagination run wild. Industrial designers will also appreciate the new spline tools that make long smooth paint strokes and masks a breeze." Mark Thomas, President and Founder, Right Hemisphere.

Deep Paint Version 2 also ships with a demonstration version of ImageAlign PRO www.grasshopperonline.com, available in a Photoshop plugin or standalone, which allows digital artists to correct the perspective distortion of digital photographs.

"With ImageAlign™ PRO digital artists can correct perspective distortions, barrel problems and pin cushion flaws, in any 2D digitized or digital image and all in a single pass. Combining our technology with Deep Paint Version 2, lets digital artists quickly and easily correct any distortion of a digital image, import the image and easily convert existing photos or illustrations into virtually any medium." Geoff Knox, Chief Executive of Grasshopper Ltd.
